A Horse Racing System Based on a Statistical Approach to Selection and Staking: Horse Racing Selection and Staking Based on Statistical Analysis

By MR Lucky Lew

Createspace, United States, 2013. Paperback. Book Condition: New. 220 x 148 mm. Language: English . Brand New Book ***** Print on Demand *****.Horse Racing systems are notorious for working for short periods of time or over historical data but they always seem to start to fall over when you start to place money on the selections. This is usually because of back fitted results and the systems producer having no background in statistics and probability. It has also been identified that horse racing punters are quick to pick up on anomalies which slowly erode the odds and value. The system explained in this book is very different to the selection processes of most systems as it takes into account statistical analysis and horse racing truths which have held constant over time and makes money from them. This Horse Racing System is consistent, easy to follow and profitable. It is all of these things because the rules for it are not subjective and are all based on statistical analysis. It also uses at its heart principles and statistics which have been known to all horse racing punters, but it uses them to profit.
