In order to determine from hence the coefficients A, B, C, D, wc only need take the sum of these roots, the sum of every two of them, and so on. The following treatment, which has been frequently made use of already in the preceding part of this work, leads to the object in a shorter way. Let S1, S2, S3, S4, denote the sum of these roots, the sum of their squares, cubes, and fourth powers; then, when in IX, --A and C are put for A and C, and the symbol S for the one there used, A = S1 B-ASl-Si 2 c BSl-ASz + S3 3 D = CS--B + S3--S4, 4 Solution 1. By the two preceding it is easily inferred, that when n is the number of the irrational magnitudes Vp, /q, . Vie, the degree of the rational equation is equal to the power 2. But since the different values of x are such, that two of them are always similar, but with different signs, the equation consequently is only of the 2 -1th degree, when we put x = y. 2. The conclusions in the two preceding, when ex tended, give the following results: 3. Hence the law of the formation is easily perceived....
